

## Key Contractors Appointed for Maiden Drilling at Reynolds and Reitenbach Lake Uranium Projects

Rodren Drilling Ltd appointed as diamond drilling contractor, bringing over 47 years of experience supporting mineral exploration and uranium drilling programs across Canada, including in the Athabasca Basin.

Archer Cathro & Associates Ltd appointed to provide in-field geological services throughout the upcoming drilling program, bringing over 60 years of exploration experience across northern Canada.

Minimum 2,500m drill program developed to effectively test unconformity/basement-hosted uranium targets defined by the 2025 airborne geophysics and field programs, with ability to scale up the program based on drilling results.

Drilling will target zones where ~80 km of EM conductors coincide with structural corridors (defined using airborne magnetics) and uranium geochemical anomalism across Reynolds and Reitenbach Lake.

High-grade uranium confirmed at the Titus Showing, where a uraninite-bearing rock sample returned 1.90% U<sub>3</sub>O<sub>8</sub> along a prospective EM conductor hosted in a interpreted metapelitic unit adjacent to a broad structural flexure, will be drilled this spring.

Mobilisation of contractors to Reynolds and Reitenbach Lake is expected mid-April 2026 with drilling scheduled to commence shortly thereafter.

Concurrently, Portland Creek airborne geophysics survey expected to re-commence in April to support target refinement ahead of expanded 2026 exploration and drilling program.

Infini Resources Limited (ASX:I88) (“Infini” or the “Company”) is pleased to announce the appointment of Archer Cathro & Associates Ltd (“Archer Cathro”) and Rodren Drilling Ltd (“Rodren Drilling”) as key contractors for the Company’s planned maiden drilling campaign at Infini’s 100% owned Reynolds Lake and Reitenbach Lake Uranium Projects, located on the eastern margin of the world-renowned Athabasca Basin uranium camp.

**Infini’s Chief Executive Officer, Rohan Bone, said:** *“We are very pleased to appoint Archer Cathro and Rodren Drilling to support our maiden drill campaign at Reynolds Lake and Reitenbach Lake, both of whom bring extensive experience supporting uranium exploration programs across northern Canada.*

*The scale of the EM conductors, strong uranium geochemical anomalism and the high-grade Titus Showing together highlight the prospectivity of the system and provide compelling targets for drilling.*

*With preparations now well advanced, we look forward to commencing our maiden drill program on the margins of the Athabasca Basin in Q22026."*

#### Appointment of drilling and geological contractors in preparation for maiden drilling campaign

Rodren Drilling is a highly regarded Canadian drilling contractor with more than four decades of operational experience delivering diamond drilling services across complex, often remote geological environments throughout Canada. The company has a strong track record supporting uranium exploration programs, including work across the Athabasca Basin, and is recognised for its focus on operational efficiency, safety and environmental stewardship.

Rodren Drilling will be responsible for executing the diamond drilling component of Infini's maiden drill program at Reynolds Lake and Reitenbach Lake, designed to test priority targets associated with conductive horizons, structural corridors and geochemical anomalies identified across the projects.

Archer Cathro will provide geological services throughout the program, including drill supervision, geological logging, sampling and field program coordination. Archer Cathro is one of Canada's most established geological consultancies and has been actively involved in mineral exploration across northern Canada for over 60 years, supporting numerous discoveries across a range of commodities including uranium, gold and critical minerals.

Their technical expertise and deep experience operating in northern exploration environments will support efficient execution of the drilling campaign and real-time geological interpretation as drilling progresses.

**Infini's Exploration Manager, Nick Mitchell, said:** *"We are excited to begin the maiden drilling campaign at the Reynolds and Reitenbach Lake Projects. The targets have been defined through careful review of the surface work and analysis of the geophysical surveys completed in 2025, giving us a strong technical foundation for this drill program."*

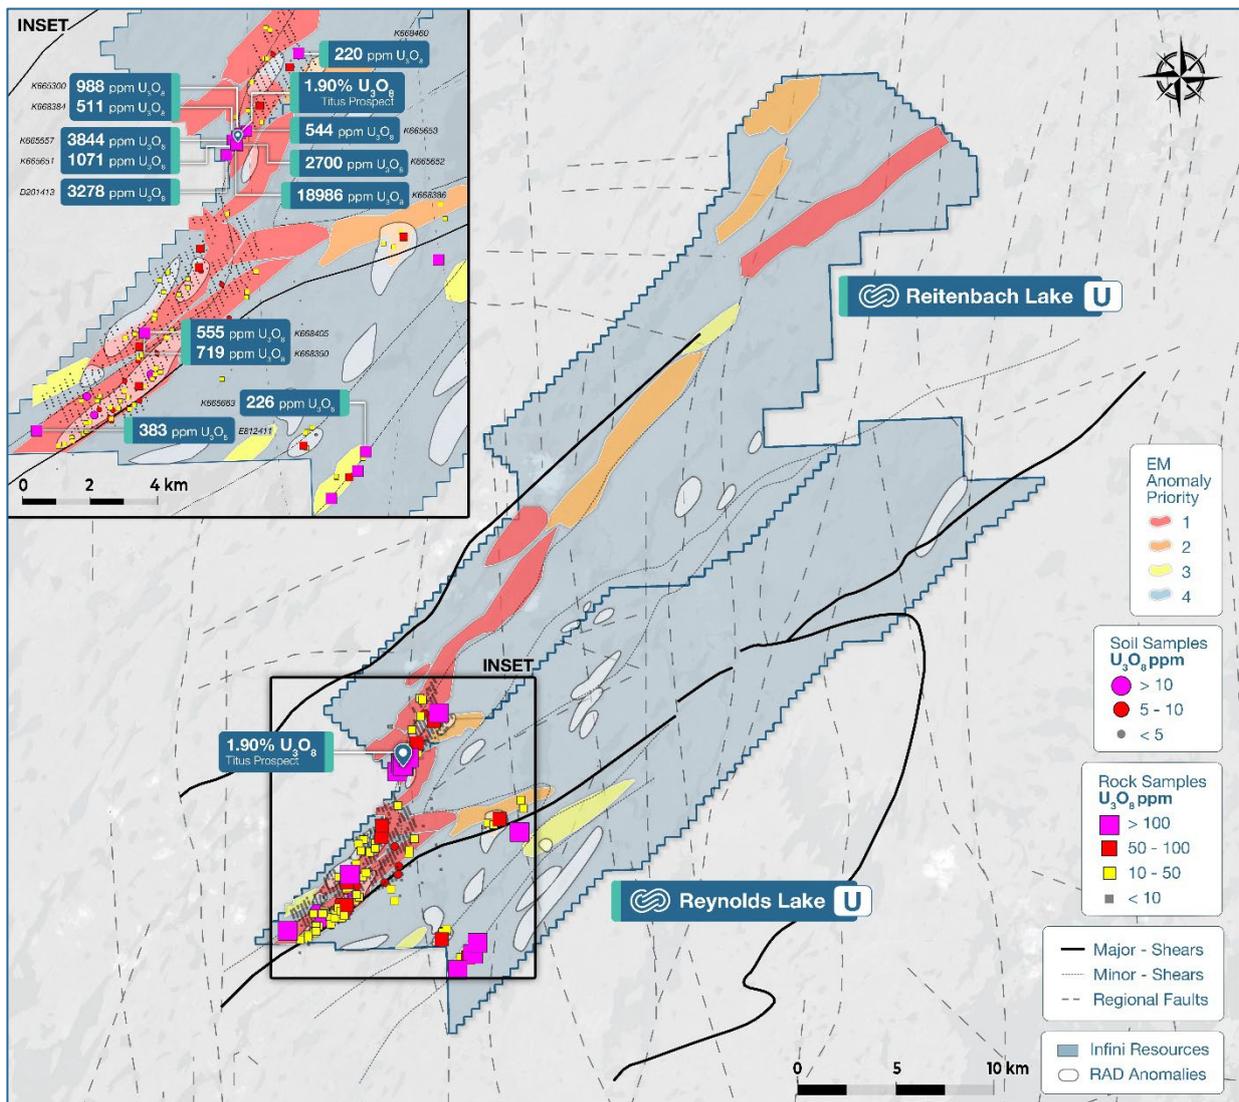

*"With a highly experienced team in place, we are now ready to test a series of well-defined targets generated through a multi-disciplinary exploration approach. Both Archer Cathro and Rodren Drilling bring deep roots in Canadian exploration, and that experience allows us to stay focused on the science of discovery while deploying exploration capital efficiently and where it matters most, in the ground testing high quality targets."*

Mobilisation of both contractors to site is scheduled to commence mid-April 2026, with drilling activities expected to begin shortly thereafter.

The program has been designed with agility and flexibility in mind, allowing drilling intensity and scope to be scaled quickly in response to results. An initial 2,500m campaign will focus on high-priority targets, with early success guiding additional follow-up drillholes.

Drilling will focus on testing kilometre scale graphitic conductive horizons, and associated structural intersections interpreted from airborne geophysics Excite EM and MAG datasets across the Reynolds Lake and Reitenbach Lake projects. These identified features represent favourable settings for basement-hosted uranium mineralisation. Priority targets are defined by the spatial association of EM conductors, structural corridors and uranium geochemical anomalies, including areas surrounding the high-grade Titus Showing where a uraninite-bearing sample returned 1.90% U<sub>3</sub>O<sub>8</sub>. Final drillhole locations and orientations will be refined following permitting approval and confirmation of suitable drill platforms.

Further updates will be provided as the Company progresses toward drill commencement and begins on ground operations.

**Figure 1 Overview of the Reynolds and Reitenbach Lake Uranium Projects highlighting the confluence of interpreted airborne EM conductors and major structural architecture with soil and rock-chip uranium assay results from the Phase 1 and Phase 2 field programs, including the 1.90%  $U_3O_8$  uraninite-bearing rock sample at the Titus Prospect.**

### About Reynolds Lake & Reitenbach Lake

The Reynolds Lake and Reitenbach Lake Uranium Projects collectively comprise 22 mineral claims covering a total footprint of 766 km<sup>2</sup> on the eastern outboard margin of the Athabasca Basin in northern Saskatchewan. The projects are contiguous, with Reynolds Lake consisting of 12 claims (386 km<sup>2</sup>) and Reitenbach Lake consisting of 10 claims (381 km<sup>2</sup>) adjoining its northern boundary.

The properties are underlain by Archean to Paleoproterozoic metamorphic and igneous rocks and are bisected by the crustal-scale Needle Falls Shear Zone, a major structural corridor separating the Wollaston Domain to the west from the Peter Lake Domain to the east. The Wollaston Domain is dominated by Paleoproterozoic siliciclastic metasediments including paragneiss, quartzite, and calc-silicate units, while the Peter Lake Domain contains Archean to Paleoproterozoic granitoid gneisses and supracrustal rocks. Both domains are strongly deformed and metamorphosed, with northeast-trending isoclinal folding and later cross-cutting north-south fault systems that provide structural complexity and potential pathways for hydrothermal fluid flow.

Graphitic schists and gneisses, key lithologies known to host unconformity-related uranium mineralisation, have been identified within the project area and are spatially associated with electromagnetic conductors, radiometric anomalies and elevated uranium-in-lake sediment samples. Recent exploration has confirmed primary uranium mineralisation at surface at Reitenbach Lake, while petrographic analysis has validated a structurally prepared and hydrothermally altered basement environment consistent with an unconformity-related uranium system.

Regionally, the geological setting is considered analogous to uranium systems at Eagle Point and Rabbit Lake, where mineralisation occurs along graphitic shear zones at the boundary between Wollaston metasediments and granitoid basement.

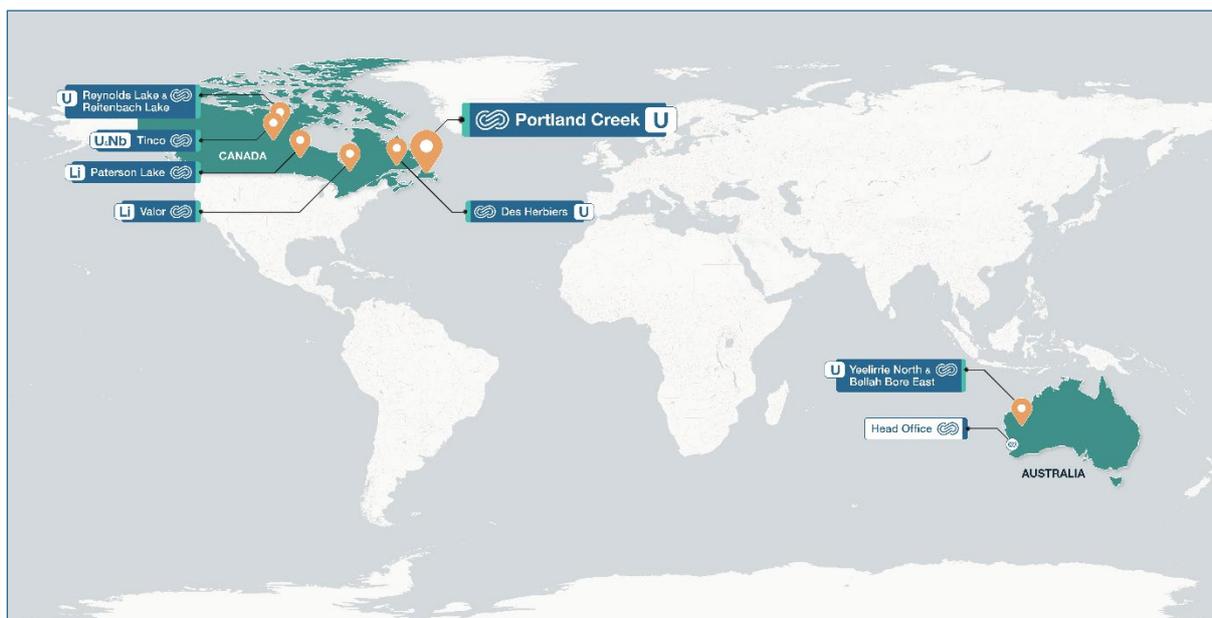

**Figure 2: Location of the Reynolds Lake and Reitenbach Lake Uranium Projects relative to the world-renowned Athabasca Basin, synonymous with high-grade uranium deposits, and in close proximity to existing operations, access and infrastructure.**

**About Infini Resources Ltd (ASX: I88)**

Infini Resources Ltd is an Australian energy metals company focused on mineral exploration in Canada and Western Australia for uranium and lithium. The company has a diversified and highly prospective portfolio of assets that includes greenfield and more advanced brownfield projects. The company's mission is to increase shareholder wealth through exploration growth and mine development.

JORC 2012 Mineral Resource Deposit	JORC 2012 Classification	Tonnes and Grade
Des Herbiere (U)	Inferred Combined Resource	162 Mt @ 123ppm U <sub>3</sub> O <sub>8</sub> (43.95mlb)

**Compliance Statement**

This announcement contains information on the Reynolds Lake Uranium Project and the Reitenbach Lake Uranium Project extracted from ASX market announcements dated 25 February 2025, 31 March 2025, 24 July 2025, 20 August 2025, 9 September 2025, 22 September 2025, 2 October 2025, 3 October 2025, 26 November 2025, 23 December 2025, 12 January 2026, 19 January 2026 and 28 January 2026 and reported in accordance with the 2012 edition of the "Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (JORC Code). The original market announcements are available to view on [www.infiniresources.com.au](http://www.infiniresources.com.au) and [www.asx.com.au](http://www.asx.com.au). The Company is not aware of any new information or data that materially affects the information included in the original market announcement.

This announcement contains information regarding the Des Herbiere Mineral Resources Estimate extracted from the Company's Prospectus dated 30 November 2023 and released to the ASX market announcements platform on 10 January 2024, reported in accordance with the 2012 edition of the "Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (JORC Code). The Company confirms that it is not aware of any new information or data that materially affects the information included in any original announcement and that all material assumptions and technical parameters underpinning the estimates in the original market announcement continue to apply and have not materially changed. The original market announcements are available to view on <https://infiniresources.com.au> and [www.asx.com.au](http://www.asx.com.au).
